Key Stakeholders within Dietrich DEI Ecosystem 2

In our interviews, we identified four different pain-points within DEI

- Lack of communication between departments on DEI initiatives.
- Need for improved planning visibility:
    - Help event planners see who else might be interested in collaborating on an event; or, similar ongoing programs they could coordinate with or be inspired by; or, past programs they can learn from.
- Motivating volunteers:
    - any volunteer-based initiative could use more motivation. More motivation = more hours & ideas contributed to DEI.
- Event facilitator tool:
    - Many tedious steps slow down event planning, giving volunteers less time to reflect or collaborate with others.
        - Possible solutions include a public event database; or, a reminder system so planners could easily coordinate tasks between volunteers; or, a master document containing event information which can be formatted as an email, CMU newsletter, The Tartan article, ect.

Because Dietrich DEI is decentralized, here are some things to consider

- Very different perspectives within the same environment.
    - When interviewing multiple stakeholders, be sure to triangulate opinions. For example, ask one stakeholder their thoughts on an opinion gathered during a previous stakeholder interview.
- Most departments don't collect metrics to evaluate the success of their DEI initiatives. Instead, departments rely on general impressions to evaluate whether an event was successful and should be pursued in the future.
    - Given their limited time, volunteers are less keen than full-time staff when it comes to implementing data-driven success metrics.

    - No standard is enforced for data collection, making it difficult to aggregate data between departments.
- Certain departments have stronger historic ties, making them closer to some departments over others.
    - Example: History department is closer to English & Modern Languages since shared interest and majors/programs/faculty overlap bring them together.
- Effects of volunteer-basis on DEI
    - Volunteers are contributing their often very limited time, with very little personal gain.
        - Because they are volunteers, motivation and incentives are key. Work is being done to improve motivators, but user testers have said:
            - On an individual level, volunteer work is not recognized during performance reviews.
            - Organizationally, departments do not benefit from their volunteer work with additional resources such as grants.

Key Stakeholders within Dietrich DEI Ecosystem

Associate Dean for Diversity, Equity, and Inclusion	Plans, coordinates, and manages DEI within Dietrich.
Senior Administrative Coordinator	Creates email lists; coordinates all communication within Dietrich, including DEI. Admin for the associate dean of DEI.
Business Managers	Decides which events/initiatives should be implemented, changed, or stopped. Leadership role.
Admins	Will usually be in charge of executing DEI events/initiatives within a department.
DEI Advisory & Implementation Committee	Key DEI volunteers, who help shape and direct the implementation of the strategic plan. https://www.cmu.edu/dietrich/about/dei/committees.html
DEI volunteers	Usually in charge of implementing DEI initiatives, especially within their own

	departments.
IT & Operations	Maintain CMU's technology and technical tools, including the website. Responsible for maintaining and modifying the DEI post-event data collection form/tableau.
Dietrich Community	Dietrich students, faculty, and staff are all impacted by DEI.

Note: Each Dietrich department runs their DEI initiatives independently. This means that a role's responsibilities might vary depending on the department.

Key Organizations within Dietrich DEI Ecosystem

Key Organizations	**Description**
Dietrich DEI	Self-explanatory.
DEI	DEI is coordinated across the entire university. Additionally, each college has its own associate dean in charge of implementing DEI within their college.
Institutional Research & Analysis	Stores all of CMU's demographic data. Since the data must be handled securely, the IRA can only give limited access. Typically, the requested data is compiled as a pdf report. They are working on a demographic data dashboard, which could integrate the *CMU Dietrich DEI Post-Event Data Collection Form.*
IT & Operations department	Maintains CMU's tech tools, as well as their website. Although demographic data is housed in the IRA, the DEI Dean usually requests demographic data through the IT & Operations department.
