Highlights:

- To demonstrate our solution's value, we should link it to the following strategies listed in the strategic plan. Whenever possible, the data captured by our form should support stated goals, strategies, or success indicators. We will explicitly link them.
- In the final presentation, mention our solution supports: #X goals, #Y strategies, and #Z indicators listed in DEI's strategic plan.
    - Supports goal 2 of the graduate strategic plan:
        - Goal: "Provide an equitable and inclusive environment for graduate students."
        - STRATEGY A: DATA COLLECTION → "While we can make some initial inferences about climate, more data collection is needed to ascertain the particularities of how graduate students in Dietrich College experience their education at CMU, institutional policies and resources and climate community." While referring to the demographic climate surveys, the same applies to programmatic data.
        - Strategy C: "ESTABLISH ANNUAL COLLEGE-WIDE EVENTS FOR INFORMATION AND INTERFACING BETWEEN STUDENTS AND ADMINISTRATION" -> indicator: "Annual college-wide events per goals."
        - Our solution supports related indicator: "Long-term assessment of implemented strategies on a case-by-case basis."
        - **Convincing stakeholders:** use solution, strategic plan dedicates human capital (i.e., time, labor, material goods and faculty time) "for gathering and analyzing data toward the end of better understanding campus climate."
    - "College-level goal": "Host departmental and college-wide events that center on diversity, equity and inclusion, as well as provide opportunities for administration and students to interface." -> distinguish between department vs. college wide initiatives.
    - "College-level goal": "Create reporting mechanisms to communicate the status of the college's DEI initiatives"
    - Faculty indicators supported: Faculty grant writing workshops held; Faculty RPT workshops;
    - Undergraduate goal: Goal 1, strategy A: CREATE DIVERSITY@DIETRICH
        - success indicator: "Additionally, we will consider attendance at events and feedback collected from event attendees as indicators for the program's success."
    - Useful quotes, might want to reference in later writing:
        - "Encourage all members of the college community to contribute to diversity, equity and inclusion efforts."
        - "Members of the Dietrich College community have provided compelling anecdotal evidence of issues regarding climate; however, this strategic plan is the first time the college has made a commitment to systematically collect and analyze data on the environment in which our faculty, staff and students learn and work"

        - "We will work to achieve these goals by implementing concrete practices at the center of our daily work that minimize bias and support diversity, by holding ourselves accountable to show progress and by attending to and revising these practices relentlessly"

New ideas for data capturing:

- Is this a recurring event?
    - **"Strategy A:** Host monthly/quarterly lunch workshops targeted at educational practices for educating students, centered around a specific issue/problem/challenge each session." -> Diversity@Dietrich require regular monthly workshops.
    - "Another pillar of the sessions we hope to host are issue-specific workshops that can produce more inclusive, contemplation of all identities." -> could ask, did your workshop / event specifically target an issue related to DEI? If so, what? (e.g. pronoun inclusivity workshop).
- Unlikely: Wildcard capture, if trying to lead new initiative (like increase number of grant writing workshops), encourage them to capture one new field of data for a short period of time.

Notes:

diversity-equity-inclusion-strategic-plan.pdf (cmu.edu)

Department vs. college-wide event vs. student led: "Host departmental and college-wide events that center on diversity, equity and inclusion, as well as provide opportunities for administration and students to interface."

Highlight whether DEI events (Fall and spring colloquium focused on DEI, if ours, more data?) vs. department events?

Was the course led inclusively? (Not sure how to capture this metric, like maybe a checklist of good DEI practices we hope you do but aren't forced: i.e. Strategic Initiative: Increase the use of inclusive classroom practices -> "Include a measure of inclusivity in faculty course evaluations." (whatever measuring here, but could also do guidelines: like did you introduce yourself to strangers' with pronouns))

Inclusivity, Eberly Center -> currently not in good state. Long-term task.

Classroom anonymous feedback, course feedback on inclusivity -> maybe ask them what question they ask / tool they use.

Inclusivity, include in attendee post-event survey (not volunteer survey).

Need: host workshops on how to host accessible workshops, make it accessible.

Yes: having a summary tool, either visualize in graph OR use scorecard with aggregate + filter.

Visualization, data to collect:

- Summary statistics (i.e. total number of events, which types/goals, ect.)
- Summarize data that illustrates progress towards specific goals in strategic plan: i.e. "Annual college-wide events per goal"

- Number of staff-related events: ‘Very little data exists on the experiences of staff in Dietrich College.’ -> or, is this priority really meant only for climate survey-type data.
    - STRATEGY A: “GATHER DATA TO CONTEXTUALIZE AND MAP THE ENVIRONMENT”
    - STRATEGY C: “INCREASE OPPORTUNITIES AND FUNDING FOR PROFESSIONAL DEVELOPMENT THROUGH TRAINING AND COMPETENCE BUILDING”
- Look at scorecards in appendix, introduce relevant data into visualized summary for Ayana?
    - **What’s up with the Dietrich Scorecard? Whose making them? Is it important we have the scorecard in mind when designing visualization?**
    - What is the role of the scorecard at the end of the appendix. Will you have to make scorecards? If so, should we prioritize those data points.
        - Data points: (department level) grant writing workshops, diverse representation in events,
        - Entire Dietrich college level: grant writing workshops, research events,
- **Is there any data that** isn’t collected in the form, but that would be super helpful for informing context in the google sheets. E.g.: Inclusive faculty score. If so, we could integrate some solution to pull & update that data, but obviously, it must be really helpful and not just something you could easily do yourself for it to be worth it.

Unorganized Notes:
Self identification survey + integrated with Eberly Center.

Handoff: guide for changing fields, reminder to change one of three options.

Ensure student post-survey is accessible.

Success metrics -> many were on success level -> have department scorecard, summary of # of events and
Metadata, summarize department statistics.
Linking data to specific goals in strategic plan: college Annual college-wide events per goals.

What about orientation training?

Unrefined success categories:
Inclusion: everyone should feel as though they belong; # of diverse perspectives involved; active participation from historically underrepresented group. -> ASK the Eberly Center.
Equity: accessible by anyone

Four sub-groups: faculty, staff, graduate, undergraduate.
“Encourage all members of the college community to contribute to diversity, equity and inclusion efforts.”

Different event types mentioned in strategic report:
Orientation, faculty training @ eberly center, staff professional development series, **town hall (def town hall, a lot of strategies call for these).**
