Note: Ask questions related to what you are testing!

1. **Introduction**
    a. Introduce yourself
    b. Explain the product to the user:
        i. Previously, when the associate dean requested data on DEI events run by departments, they had to individually email each department. The DEI post-event form replaces these long email chains with a standardized data collection process, feeding into a single google spreadsheet. The form saves time, simplifies communication, and eliminates tedious labor.
    c. If on Zoom, ask participants for their consent to record the test. Then, begin recording.
    d. Put them at ease: *We aren't testing them, there is no right or wrong answer. Instead, we are testing our solution and how it is used in a 'real-world' setting.*
2. **Gather context**
    a. Tell me about your role within Dietrich DEI?
    b. Have you ever collected data on DEI events in the past?
3. **Think out-loud protocol** (https://www.youtube.com/watch?v=pxsJkAk_eo0)
    a. Phrases to remind participants to think aloud
        i. Could you tell us:
            1. the steps you're taking?
            2. what you're looking for?
            3. what you're trying to do?
4. **Ask questions which elicit a deeper understanding of what you're testing**
    a. Come up with your own.
    b. Some examples include:
        i. Was the question clearly worded?
        ii. Did the form flow?
        iii. Were the goals clear? Does it appear to have a clear need? If not, why not?
        iv. Are there things missing?
5. **Wrap-up the interview**
    a. Do you have anything else you would like to add?
    b. Are there any questions you have for us?
    c. Thank you for your time! With your help, we are one step closer to achieving a streamlined, effective solution. Can we contact you in the future if we have any more questions?
